

Scouring Pads

Application:

Knitmesh Technologies® long-lasting high quality scouring pads can be used for a multitude of industrial and domestic purposes including: cleaning, scrubbing and scouring a wide range of materials and surfaces. They are particularly suited for use in catering industries.

Two pad types are available in a range of sizes:

- Pure copper abrasive pad
- Galvanised steel abrasive pad

Product Overview

Knitmesh abrasive pads are manufactured using a specially designed 'flattened' wire, which forms a highly effective scouring profile, thus lessening the effort required from the user. The copper pad is made from pure copper and is suitable for jobs where a more gentle abrasive action is required.

The steel pad is made from high-tensile carbon steel and galvanised with a high specification coating of zinc. This makes it tougher than standard steel abrasive pads and enhances the performance and longevity of the product. The steel pad is much more abrasive than the copper pad.

Benefits

- Suitable for a huge range of uses/applications
- Copper pad ideal for less aggressive scouring
- Galvanised steel pad for tougher jobs
- Extended life-span improves value for money
- Copper pad suitable for cleaning grill pans, frying pans, oven racks, copper, aluminium and other alloys
- Galvanised steel pad uses include cleaning barbeque grills, woks, garden tools, rust removal, paint stripping, and varnish scraping

Potential Uses

- Commercial uses include the hospitality and catering industries, particularly Chinese and Indian restaurants
- Domestic uses include cleaning of pots, pans, baking trays, barbeques, and various DIY applications
- Industrial uses include cleaning of dirt and grease, rust and swarf from industrial machinery and equipment
- Trade uses include paint and varnish removal for furniture restoration and decorating

Caution

Abrasive pads are not for use on delicate surfaces (eg. non-stick, plastic, glass). If in doubt, check on a test piece first.

Size Ranges

| Product Code | Material | Weight Range (g) |
|--------------|------------------|------------------|
| W20 | Galvanised Steel | 19.0 - 19.5 |
| W25 | Galvanised Steel | 22.5 - 23.0 |
| W30 | Galvanised Steel | 27.5 - 28.5 |
| W40 | Galvanised Steel | 31.0 - 32.5 |
| W60 | Galvanised Steel | 48.0 - 50.0 |
| W90 | Galvanised Steel | 75.0 - 85.0 |
| C20 | Copper | 19.0 - 19.5 |
| C25 | Copper | 22.5 - 23.0 |
| C30 | Copper | 27.5 - 28.5 |
| C40 | Copper | 31.0 - 32.5 |
| C60 | Copper | 48.0 - 50.0 |

Material Specifications

| Copper Wire | |
|-----------------------|---|
| Material Grade | Pure copper |
| Wire Diameter/Gauge | 0.24mm |
| Galvanised Steel Wire | |
| Material Grade | High tensile carbon steel |
| Wire Diameter/Gauge | 0.26mm |
| Zinc Coating | Extra-thick zinc galvanising to KnitMesh Technologies unique specification, as used for harsh environment engineered products |

Corrosion Resistance (Galvanised Scourers)

A KnitMesh Technologies' galvanised steel scouring pad, and a leading competitors' galvanised pad were placed in separate identical bowls of tap water for 7 days. The water was then allowed to evaporate at ambient conditions. The pictures below show the before and after states of the two scourers.

KnitMesh scourer before and after corrosion testing

A KnitMesh W60 galvanised steel scouring pad. The left hand side shows the state before water immersion. The right hand side shows the scourer after the corrosion test with only small spots of rust to be seen.

Leading competitor's scourer before and after corrosion testing

A Competitor's equivalent galvanised steel scouring pad. Again the left hand side shows the scourer before the test and the right hand side shows it afterwards. It can be seen it has completely rusted.

Further Information
